Agenda

Topic	Description
Scope of project	Is our current idea 'enough' for a final project?
Logged in Users	Our web application will be easier to use if users don't log in - should we also add the option to log in so that we can add 'complexity' to our project (if our idea is too simple)
Addressing feedback from pitch (1)	**Question: Will there be a way for the group or a specific user to filter on ideas that have been noted with a '!' ? If not how will users go back to these ideas saved for later? How will the group decide that enough discussion has taken place to remove the '!'** The moderator will decide whether enough discussion has taken place, and thus will remove the '!' when he/she wants to We could add a 'filter' feature that would allow the users to see only the '!' ideas
Addressing feedback from pitch (2)	**What kind of voting mechanisms will you provide to help promote ideas?** Users will vote on the ideas. So if a user likes an idea and wants to discuss that idea, the user will click on the bubble of the idea, and that bubble will grow larger
Addressing feedback from pitch (3)	**If users don't create accounts, what's to stop a malicious user from joining again after being kicked out of a group** The code of the meeting could be changed Other ideas???
Addressing feedback from pitch (4)	**Is just a few words of text enough to encapsulate an idea? Maybe there should be a way to expand an idea and add longer-form descriptions?** We could add this as an additional feature - so perhaps right-clicking on a bubble shows a larger description of the idea
Addressing feedback from pitch (5)	**Might there be a period where folks can only post positively about an idea, followed by an open period where positive and negative views are allowed?**

	This might disrupt the flow of the meeting, we want people to contribute their thoughts as flexible as possible

Progress Report

Task	Status	Comparison to milestones of the project plan / goals set at previous meeting
Design of pages	UI design is done, css/html currently in progress	On track
Routing	Most MVP endpoints partially implemented, need to hook up to database	
Components, Actions, and Views for pages		
Components, Actions, and Views for ideas/board		

Meeting Minutes

Mentor discussion and advice
- Scope
  - Current idea is enough for final project
  - Kim might have ideas later if we want to add more
- MVP
  - Be able to delete bubbles - let moderator delete them
  - Only upvote each idea at most once
  - Kicking users - they're anonymous, how to tell
- App simplicity
  - Could add buttons to bubbles to be able to add comments/stuff
  - Also up to us - Kim thinks it would be okay either way, just have to explain why we chose what we chose

New ideas
- Add rotary menu to bubbles to be able to add comments/upvotes/etc

*Next meeting moved to Wednesday at same time and place
